Figure 12-10. You can use the Extract Selection tool to isolate only certain areas of an image, which will then be selected for further editing. Adjustment Layers allow you to change the appearance of one part of an image without affecting the rest of the pixels. So if you want to adjust a small section of a photo, you can place a selection on a layer and then use either the Dodge or Burn filter to selectively make the adjustment. The Dodge and Burn tools are both very useful for subtly changing the appearance of an image. The Spot Healing Brush is great for fixing small problems like an area of the image that has been accidentally merged with a different color. You can bring these small problems back to the correct color by selecting the Spot Healing Brush and clicking any area of the photo. ## Retouching an Image Sometimes you want to make a change to an image but don't want to risk making it irreversible by using Undo. This is especially true of professionals. The next three sections of this chapter show you how to retouch images.

Q: How do you customize a Material Components Card? I am looking at the code for the MDC Card component's style, and how they have tried to keep it customizable. It has 3 attributes that can be set by default, (e.g. divider color, text color, border color, etc.). But you can add custom attributes like, for example, (color: red) so you can pick whatever color you want. I am looking to reproduce this behavior. How do you go about this? A: By default, only the #MDCF0 parameters can be customized. Styling doesn't imply that the component needs to be re-built so have a look at their d.ts - import '@material/mwc-button'; import '@material/mwc-card'; import '@material/mwc-icon'; import '@material/mwc-linear-progress'; import '@material/mwc-progress-circular'; import '@material/mwc-switch'; import '@material/mwc-text'; import '@material/mwc-textfield'; import '@material/mwc-textfield-core'; import '@material/mwc-typography'; import '@material/mwc-ripple'; import '@material/mwc-scroll-snap-indicator'; import '@material/mwc-image'; import '@material/mwc-ripple'; import '@material/mwc-switch'; Some other material components have some additional properties to customize. For example, the Card has the mdcCardDeck, which needs to be set to true in order to show the scroll indicators. Can birth weight predict future health problems? Review of the literature. There were insufficient data in the literature for clinical decisions, so a meta-analysis was not conducted. A moderate association was found between birth weight and weight problems (birth weight
